# Company Overview

**Diaspora Sdn Bhd**, a Bumiputera company was established in 2007, comprises personnel full of experience within their domain. Our human capital has strong knowledge and expertise which we believe is the basis of our excellent service delivery in meeting customer expectations.

Diaspora Sdn Bhd had been certified with MS ISO/IEC 27001:2013 in May 2012. We achieved a successful migration to the ISO/IEC 27001:2022 standard with CyberSecurity Malaysia in April 2024. By adhering to the ISO standard, we ensure that our clients' information is securely handled in accordance with our policies and procedures.

Our activity offers professional services with deep know-how in the spectrum of ICT services such as:

1.Information Security Governance and Compliance

- ISO/IEC 27001:2022 Information Security Management System (ISMS)
- ISO/IEC 22301:2019 Business Continuity Management System
- Cyber Security Audit

2.Cyber Security Assessment and Testing

- Security Posture Assessment (SPA);
- Compromise Assessment; and
- Cyber Drill

3.Disaster Recovery Plan

Exploring new technologies is our embedded culture in ensuring the technical team's knowledge is competitive with current industry trend.

# Company Mission and Vision

**Mission**

Managing with greatness and untamed strength, improving everything daily.

**Vision**

Leading with inspiration and courage, obsessed with future possibility, and in a love affair with change.

**Why Choose Us**

1. Since 2007, we have provided exceptional services for organizations of all sizes. Our employee's know-how skills must meet clients' expectations. We love to create value for our customers while providing our services.
2. Our team is equipped with industry-renowned certification.
3. Flexibility to serve you better. We employ a small core staff of security analysts and draw from our pool of subject matter experts when their expertise can help us serve you better. The result? A highly nimble, more efficient approach to giving you the services you need, when you need them.
4. We offer a competitive price range without compromising our quality of service.

# Company Core Activities

TTo achieve our mission and vision our business activity is divided into three categories which are Information Security Governance and Compliance , Cyber Security Assessment and Testing and Disaster Recovery Plan.

**1. Cyber Security Assessment and Testing**

The rapid evolution of cyber threats, including more sophisticated malware, targeted attacks, and advanced persistent threats, together with increasing regulatory expectations from government authorities and industry regulators, has created an environment where organizations are required to continuously evaluate the security of their digital infrastructure and systems. As a result, Cyber Security Assessment and Testing services have become essential for organizations to proactively identify security gaps, detect potential compromises, and validate the effectiveness of their cybersecurity controls. These activities are designed to assess and strengthen the Confidentiality, Integrity, and Availability (CIA) of the organization's information assets and technology environment. Internationally recognized standards and methodologies such as ISO/IEC 27001:2022, OSSTMM, and OWASP are used as benchmarks in conducting these assessments.

The Cyber Security Assessment and Testing services provided by Diaspora Sdn. Bhd. comprise the following key components: Security Posture Assessment (SPA), Compromise Assessment, and Cyber Drill. Security Posture Assessment evaluates the organization's infrastructure, systems, policies, and applications to identify vulnerabilities and weaknesses that could be exploited by threat actors. Compromise Assessment focuses on detecting indicators of compromise within the network and systems to determine whether unauthorized access or malicious activities have already occurred. Cyber Drill activities simulate realistic cyber incident scenarios to test the organization's incident response readiness, coordination, and recovery capabilities. Through these integrated services, organizations are able to strengthen their cyber resilience, improve security governance, and ensure that their ICT environment is protected against emerging cyber threat.

# Company Core Activities

## 2. Information Security Governance and Compliance

We provide Information Security Governance and Compliance consulting services to help organizations strengthen their cybersecurity governance, regulatory compliance, and operational resilience. In today's digital environment, organizations are increasingly required to adopt internationally recognized standards and best practices to safeguard their information assets and critical systems. Our services support organizations in establishing structured governance frameworks and security management practices to ensure that ICT infrastructure and services operate in a secure, reliable, and compliant manner.

Our services cover the implementation and advisory of internationally recognized standards such as ISO/IEC 27001:2022Information Security Management System (ISMS) and ISO 22301:2019 Business Continuity Management System (BCMS), as well as Cyber Security Audit services. These initiatives help organizations establish effective policies, processes, and controls to protect the Confidentiality, Integrity, and Availability (CIA) of information assets, ensure continuity of critical services, and assess the effectiveness of existing cybersecurity controls. Through these services, organizations can improve governance practices, strengthen compliance, and enhance stakeholder confidence.

# Company Core Activities

### 3. Disaster Recovery Plan and Simulation Exercise

We provide **Disaster Recovery Plan (DRP) Development and Simulation Exercise** services to assist organizations in preparing for and responding effectively to disruptive incidents that may impact critical ICT systems and services. In today's highly digital business environment, system failures, cyber incidents, or natural disasters can significantly affect business operations. Our services help organizations establish a structured disaster recovery framework to ensure that critical systems, applications, and data can be restored within acceptable recovery time and recovery point objectives.

Our services include the development and review of Disaster Recovery Plans, identification of critical systems and dependencies, recovery strategy design, and the execution of **simulation exercises** to validate the effectiveness of the recovery procedures. Through structured testing and simulation scenarios, organizations are able to assess their preparedness, improve coordination among technical teams, and identify gaps in recovery capabilities. These activities help organizations strengthen operational resilience and ensure the continuity of critical ICT services during disruptive events.
